AB - J05270870 Film comprises a polyurethane obtd. by reacting an isocyanate cpd., a polycarbonate diol having a number average molecular wt. of 400-4,000, opt. added a polyester diol and/or polyether diol having a number average molecular wt. of 4,000-20,000 with a chain entraining agent.

- Pref. isocyanate cpd. includes ethylene diisocyanate, hexamethylene diisocyanate, 1-isocyanate- 3-isocyanate methyl-3,5,5-trimethylcyclohexane; etc.; prefd. polyester diol include a 4-10C dibasic acid (e.g., adipic acid and sebacic acid), a 3-10C aliphatic diol (e.g., butane diol, 1,2-propylene glycol, and neopentyl glycol), and condensates with diols having ether bonds (e.g., diethylene glycol and dipropylene glycol); partic. prefd. is polybutane diol-adipate glycol. Pref. polyether diol include polyoxypropylene glycol and polyoxytetramethylene glycol. Chain entraining agent esp. include butanediol, 1,2-propylene glycol, neopentyl glycol, diethylene glycol, dipropylene glycol, cyclohexane diol, and hydrogenated bisphenol A.
- USE/ADVANTAGE - Provides a waterproof intermediate film prepd. from thermoplastic polyurethane, improved in light fastness and resistance against permeation. (Dwg. 0/0)

IW - INTERMEDIATE FILM GLASS LAMINATE COMPRISE POLYURETHANE OBTAIN REACT ISOCYANATE COMPOUND POLYCARBONATE DIOL OPTION POLYESTER DIOL IMPROVE LIGHT FAST
